Temporary Staircase at the Gasworks Site, Bern

2025

The 22-meter-high staircase tower, made of larch wood, connects the Kirchenfeld neighborhood with the gasworks site. The additional platform at the very top offers a wonderful view of the Federal Palace panorama.

Rötschmatte High School, Ins

2025

Precise project planning is key: For the new high school in Ins, Timbatec developed solutions for the structural framework, connections, and interfaces—the foundation for an efficient, seamless implementation of the timber construction project.

Bitsch School Expansion, Bitsch

2025/2026

Due to its growth, the municipality of Bitsch is in urgent need of school space. Timbatec handled the workshop design for Amacker Holzbau AG to carry out the new construction and the addition of another story using a timber-frame construction system.

Baumschulareal development, Küttigen

2023

To date, this is probably the most extensive new construction project ever realized in Küttigen/AG. Over 150 apartments have been built in the Rombach district. Timbatec was responsible for the workshop plans for all the timber components.

The digitally designed «Krokodil», Winterthur

2019

Where the first electric Gotthard locomotives were once built, one of Switzerland's largest wooden buildings now stands. The building and the locomotive have one thing in common: they are pioneers in their respective fields.

«Krokodil» house in Lokstadt, Winterthur

2019

Where locomotives and machines were once built, a new district is now being created. Urban living and working space for over 1,500 people is being created right next to Winterthur railroad station. Timbatec was responsible for the timber engineering services for the first building of the new Lokstadt.
